Chatbot Interface Structure

Bootstrap 5 Container

Responsive layout for optimal user experience.

Input Field

User-friendly message entry for seamless interaction.

Chat History Display

Disabled textarea for chronological conversation view.

Key Functions

1. **fetchChatCompletion()**

   Initiates AI response using OpenAI API.

2. **getUploadedFileContent()**

   Retrieves content from uploaded files.

3. **updateChatDisplay()**

   Dynamically updates chat history in real-time.

Data Interaction

Chat History Array

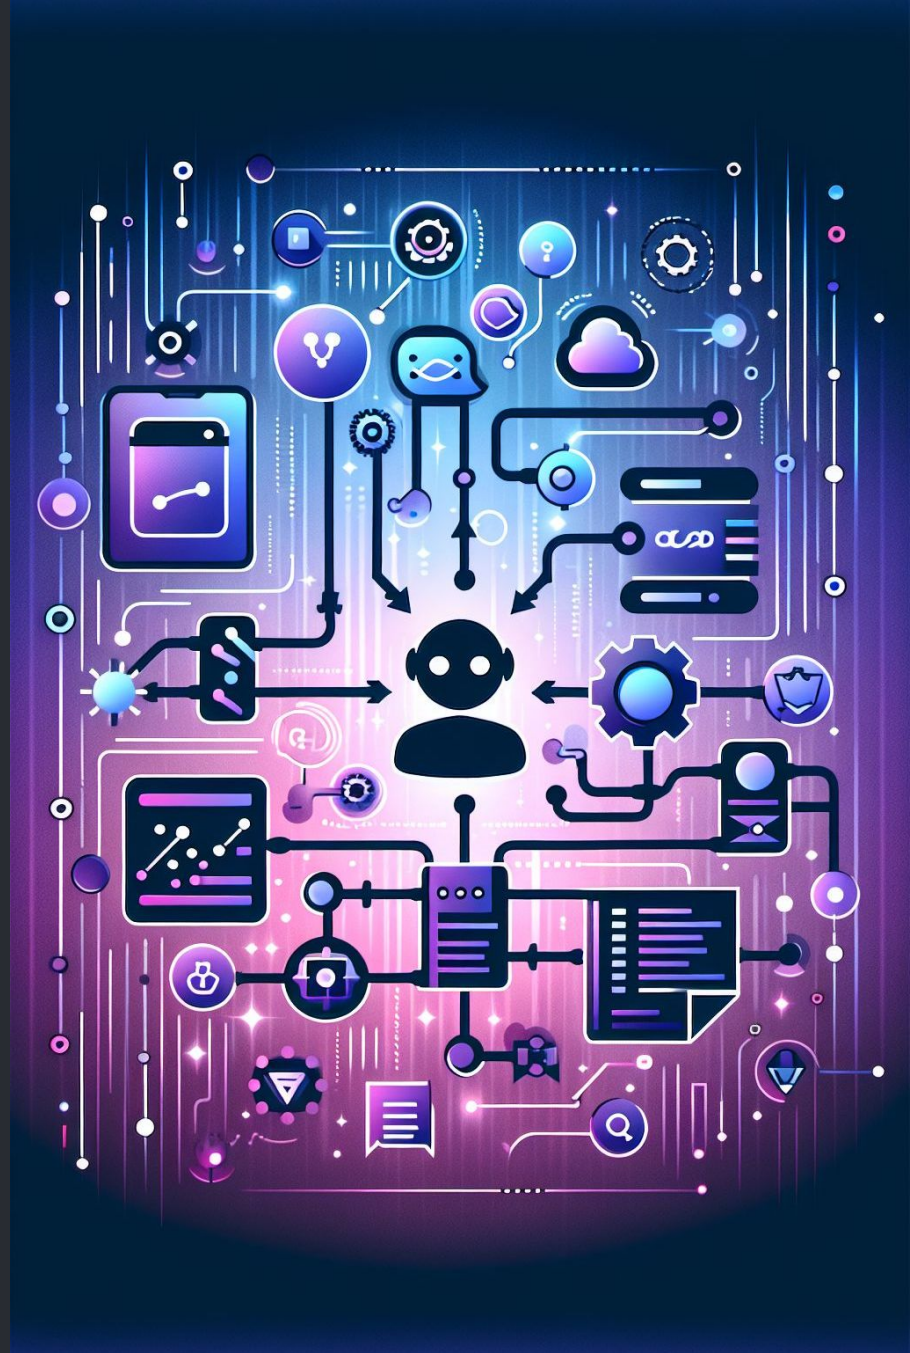

Stores conversation context for seamless interactions.

OpenAI API Integration

Leverages powerful AI for generating responses.

Real-time Updates

Ensures dynamic conversation flow between user and AI.

Error Handling

- Exception Management

  Handles errors during chat completion fetch requests.

- Error Logging

  Console alerts for troubleshooting and debugging.

- User-friendly Alerts

  Guides users through file upload errors.

File Upload Feature

1

File Selection

Users choose files to share with AI assistant.

2

FileReader Processing

Converts selected files into usable content.

3

Chat Integration

Incorporates file content into ongoing conversation.

Event Handling

Enter Key Press

Triggers chat completions for seamless interaction.

Responsive Design

Ensures smooth functionality across various devices.

DOMContentLoaded

Optimizes chat interface initialization and functionality.

Integration Benefits

1. **Robust AI System**

   Combines OpenAI, Bootstrap 5, and JavaScript.

2. **Enhanced User Experience**

   Provides engaging and interactive chatbot functionality.

3. **Scalable Solution**

   Adaptable for various applications and industries.
