# Coding BFF: Your Ultimate Programming Companion

Level up your coding skills with your new best friend!

Start Learning

# Python Basics: Slither into Coding

1. **Variables & Data Types**

   Store and manipulate different kinds of data

2. **Control Flow**

   Make decisions and repeat actions with if-else, loops

3. **Functions**

   Create reusable blocks of code for specific tasks

# JavaScript: Illuminate Your Web Pages

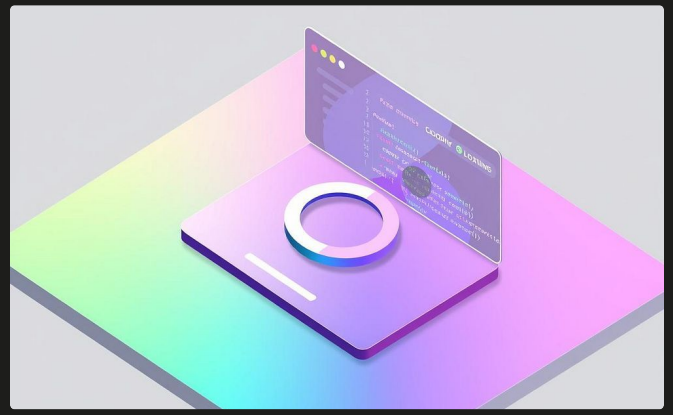

## DOM Manipulation

Dynamically update web page content and structure.

## Event Handling

Respond to user interactions like clicks and keypresses.

## Asynchronous Programming

Handle time-consuming operations without blocking execution.

# Advanced CSS: Style Like a Pro

## Flexbox

Create flexible layouts with ease

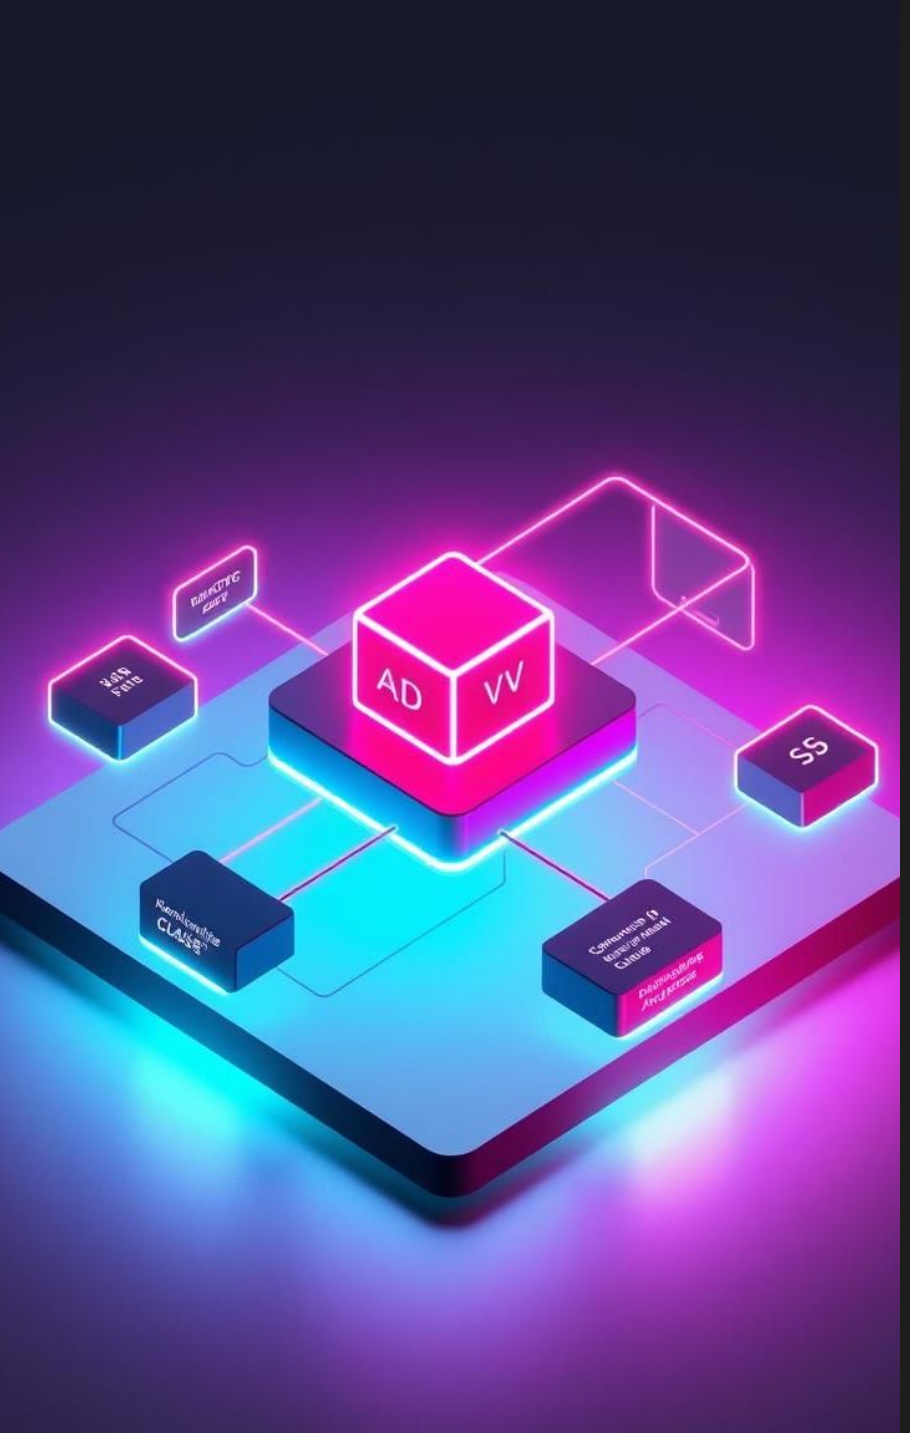

## Grid

Design complex two-dimensional layouts

## Animations

Bring your designs to life with motion

# C++ OOP: Level Up Your Code Structure

## Inheritance

Create hierarchies of related classes

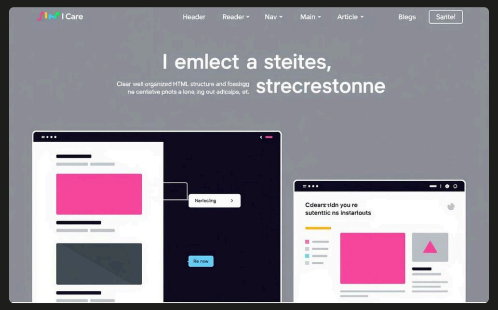

## Encapsulation

Bundle data and methods that work on it

## Polymorphism

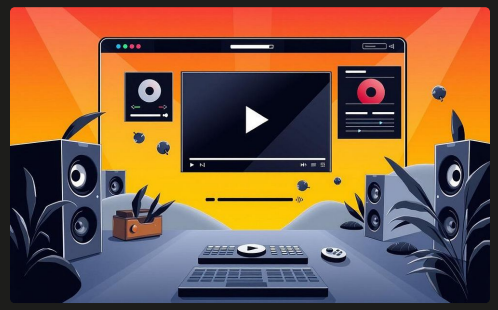

Use a single interface for different underlying forms

# HTML5 & Debugging: Build and Troubleshoot

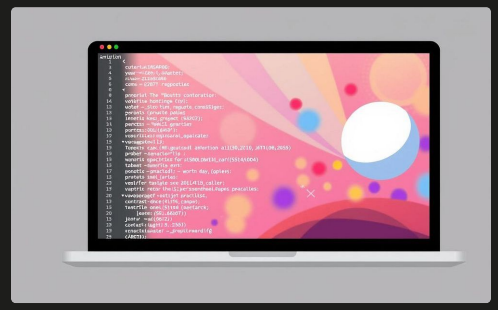

## Semantic Elements for Structure

Enhance website organization and accessibility with semantic HTML5 elements like <header>, <nav>, <main>, <article>, and more.

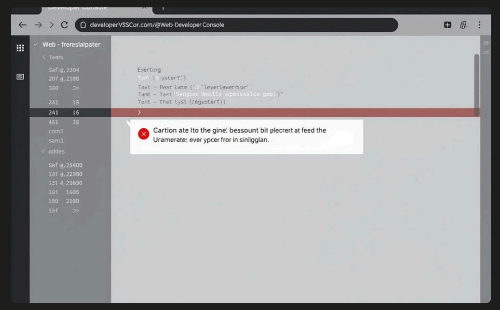

## Audio & Video Support

Effortlessly embed audio and video directly into your websites without relying on plugins, thanks to HTML5's native support.

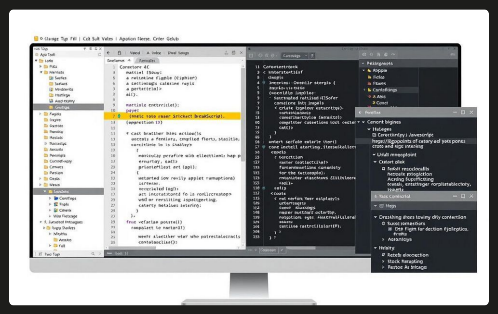

## Canvas for 2D Drawing & Animations

Create interactive graphics and dynamic animations with the <canvas> element, powered by JavaScript.

## Console.log() for Debugging

Use "console.log()" to strategically output information and track the flow of your code.

## Set Breakpoints

Pause code execution at specific points with breakpoints in the browser's developer tools to inspect variables and identify issues.

## Error Stack Traces

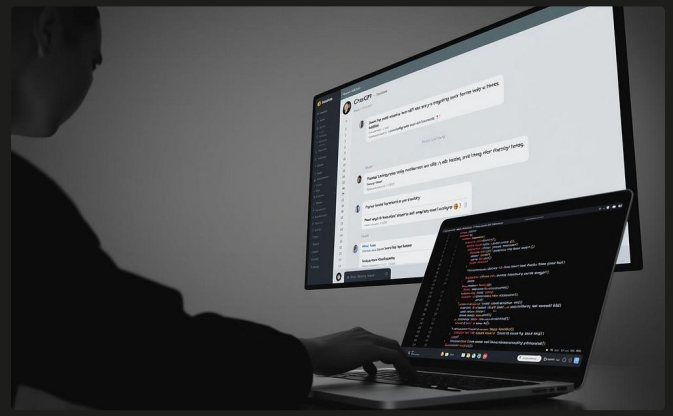

Analyze error stack traces to understand the chain of events leading to an error, helping pinpoint the source of the problem.

# AI-Powered Coding: ChatGPT & GPT Prompts

## Describe Task

Clearly explain what you need help with.

## Provide Context

Share relevant code snippets or requirements.

## Refine Output

Ask for explanations or modifications as needed.

# Clean Code & API Creation: Polish Your Skills

| Principle | Description |
| --- | --- |
| DRY | Don't Repeat Yourself |
| KISS | Keep It Simple, Stupid |
| SOLID | Single Responsibility, Open-Closed, etc. |
